## **International Symposium on GeoInformatics for Spatial-Infrastructure Development in Earth and Allied Sciences**

Hanoi, Vietnam, 16-18 September 2004

Symposium Chairs: Nghiem Vu Khai & Takashi Fujita

Editors: Venkatesh Raghavan, Hoang Minh Hien & Nguyen Dinh Duong

**The Japan-Vietnam Geoinformatics Consortium (JVGC)**  
JVGC Technical Document No.2

International Symposium on GeoInformatics for Spatial-Infrastructure  
Development in Earth and Allied Sciences (GIS-IDEAS)  
16-18 September 2004, Hanoi, Vietnam.<sup>1</sup>

**Symposium Chairs**

Nghiem Vu Khai and Takashi Fujita, Chairpersons, JVGC

**Chairman, Local Organizing Committee**

Bui Hoc, Rector, Hanoi University of Mining and Geology

**Organizing Secretary**

Dang Quang Tinh, Dept. of Dyke Management, Flood & Storm Control, Vietnam

**Advisory Committee**

Trinh Xuan Ben	Department of Geology and Minerals of Vietnam
David Hastings	UN-ESCAP
Akira Iwamatsu	Kagoshima University
Yoshinori Iwasaki	Geo-Research Institute, Japan
Bui Ta Long	Institute of Applied Mechanics, Vietnam
Mai Trong Nhuan	Vietnam National University
Ryosuke Shibazaki	The University of Tokyo
Kiyoji Shiono	Osaka City University
Tetsuya Shoji	The University of Tokyo
Kuniyoshi Takeuchi	Yamanashi University
Nguyen Thi Kim Thoa	Hanoi Institute of Geophysics
Tran Thuc	Hydro-Meteorological Service of Vietnam
Ngo Ut	Forest Inventory and Planning Institute, Vietnam
Kouji Wakita	AIST, Geological Survey of Japan
Shuichiro Yokota	Shimane University

**Steering Committee**

Ho Dinh Duan	Asian Institute of Technology
Nguyen Dinh Duong	Institute of Geography, Vietnam
Dushmanta Dutta	The University of Tokyo
Srikantha Herath	UN University, Japan
Nguyen Dinh Hoa	Vietnam National University
Kiyoshi Honda	Asian Institute of Technology
Truong Xuan Luan	Hanoi University Mining and Geology
Shinji Masumoto	Osaka City University
Muneki Mitamura	Osaka City University
Yosuke Noumi	Okayama University of Science
Phisan Santitamnont	Chulalongkorn University
Mamoru Shibayama	Kyoto University ( <i>Chairperson, Japan</i> )
Vo Thanh Son	Vietnam National University
Nguyen Ngoc Thach	Hanoi University of Science
Nitin Tripathi	Asian Institute of Technology
Tran Nghi	Hanoi University of Science ( <i>Chairperson, Vietnam</i> )
Yasushi Yamaguchi	Nagoya University
Vern Weitzel	UNDP Vietnam

**Symposium Coordinators**

Hoang Minh Hien, Hydro-Meteorological Service of Vietnam  
Venkatesh Raghavan, Osaka City University

# GIS-IDEAS 2004

## 16-18 September, 2004, Hanoi, Vietnam

### Contents

*Message from Dr. Ho Duc VIET, Chairman, Committee of Science Technology and Environment, S.R. Vietnam*  
*Message from Prof. Tran Van NHUNG, Vice-Minister of Education and Training, S.R. Vietnam*  
*Message from Dr. Nghiem Vu KHAI, Member of the National Assembly, S.R. Vietnam*  
*Message from Prof. Takashi FUJITA, Co-Chairperson, JVGC*  
*Message from Prof. Satoru.KANEKO, President, Osaka City University*  
*Message from Prof. Kiyoji.SHIONO, President, Japan Society of Geoinformatics*  
*Message from Mr.Tanaka KOJI, Director, Center for Southeast Asian Studies, Kyoto University*  
*Message from Dr. Hiroshi WANTANABE, General Manager, Earth Remote Sensing Data Analysis Center*  
*From the Editors*

#### Keynote Speech

- K-1** Representing Cultural Heritage in Digital Forms for VR Systems through Computer Vision Technique  
 Katsushi IKEUCHI 19
- K-2** Mapping from High Resolution Satellite Imagery in GIS Age  
 Shunji MURAI 25

#### Session I

##### Disaster Management and Mitigation

- S-1-1** Development of Urban Building Inventory for Bangkok Using Very High-Resolution Remote Sensing Data for Disaster Risk Analysis  
 Dushmanta DUTTA 33
- S-1-2** Development of a Decision Support System for Earthquake Risk Assessment and Loss Mitigation: the Hanoi's Case Study  
 Nguyen Hong PHUONG 42
- S-1-3** Remote Sensing in the Study of Active Tectonics and Seismic Hazards in Sonla Hydropower Dam  
 Trong Trinh PHAN 50
- S-1-4** An Experiment on the Building of Long-range Forecasting of Tropical Cyclone Activity in Northwest Pacific and Bien Dong (Eastern) Sea  
 Viet Lien TRAN 57

#### Session II

##### Special Session on ASTER

- S-2-1** Applications of Terra/ASTER Data to Environmental Management and Disaster Mitigation  
 Yasushi ARAKAWA 67
- S-2-2** The Integration of GPS and GIS to Correct DEM Data of ASTER Image  
 Van Cong Quoc ANH 72
- S-2-3** Comparison of Row Channel and Physical Index Channel Classification of ASTER in Urban Change Detection. The Case of Thanh Tri District in Suburb of Hanoi, Vietnam  
 Van Cu PHAM 79
- S-2-4** Use of Thermal Infrared Channels of ASTER to Evaluate the Land Surface Temperature Changes of an Urban Area in Hanoi, Vietnam  
 Van Cu PHAM 85
- S-2-5** Research and Development of Flood Prediction System that Uses ASTER Data  
 Fumio SHINOHARA 91
- S-2-6** Land Use Classification and Extraction of Parameters Related Water Basin Using Remote Sensing Data  
 Mizuhiko SYOJI 100
- S-2-7** Surface Heat Flux Analysis in Urban Areas Using ASTER and MODIS Data  
 Yasushi YAMAGUCHI 105

#### Session III

##### Landslides and Debris Flow

- S-3-1** Numerical Simulation for Slope Stability Analysis and Landslide Prediction in Bac Kan Province, Northeast Vietnam  
 Minh Duc DO 113
- S-3-2** Landslide Disaster Prediction Support System based on Web GIS  
 Teruki FUKUZONO 118

S-3-3	Landslide Monitoring by Photogrammetry in Monset Area, Northwestern Part of Vietnam	
	Atsushi KAJIYAMA	122
S-3-4	Remote Sensing and Geographical Information System Methods to Study, Evaluate and Estimate Erazitonal Eandslide in Son La Area	
	Ngoc Thach NGUYEN	128
S-3-5	Landslide Hazard Zonation Using the GRASS GIS: A Case Study in the Ojiya District, Niigata Prefecture, Japan	
	Venkatesh RAGHAVAN	137

#### Session IV

##### Coastal Zone and Oceanography

S-4-1	Mangrove Forest Conservation and Development Planning in Nghe An - Vietnam	
	Nguyen Huu NGHIA	145
S-4-2	Using Remote Sensing Techniques for Coastal Zone Management in the Ha Long Bay (Viet Nam)	
	Hanh Quyen NGUYEN	151
S-4-3	Application of Remote Sensing for Interpretation of Primary Productivity in Bien Dong (Eastern) Sea	
	Tac An NGUYEN	157
S-4-4	GIS Database for Sustainable Aquaculture in Mekong Delta	
	Tac An NGUYEN	164
S-4-5	Using Time-series Remotely Sensed Data to Trace Historical Changes of Loc An River Mouth Area	
	Pham Viet BACH	172

#### Session V

##### Poster Session

P-5-1	Spatial Distribution Query Language	
	Piotr BAJERSKI	181
P-5-2	Summarization of Disaster Related to the KOBE Earthquake of January 1995	
	Takashi FUJITA	187
P-5-3	Satellite Data Application for Mangrove Management	
	Kazuyo HIROSE	189
P-5-4	Geographical Features of Landslides in The Kobe Group Using GRASS-GIS	
	Atsushi KAJIYAMA	194
P-5-5	Development of PALSAR Ground Data System	
	Hidekuni KIKUCHI	200
P-5-6	Employing GIS, Exploring the Effect of Sub-grid Land-use Heterogeneity on Soil Erosion and Sediment Transport Modelling	

	Habib-ur-Rehman M	205
P-5-7	Land-cover Analysis Using Landsat Imagery and Deforestation Influence on Rainfall in Rondonia State, Brazilian Amazon	
	Megumi MARUYAMA	211
P-5-8	Soil Salinity Induced Land Cover Change Detection and Analysis in Siwa Region, NW Egypt	
	Alaa MASOUD	217
P-5-9	Multi-language Support and Localization of Free and Open Source GRASS GIS	
	Shinji MASUMOTO	225
P-5-10	Characterization of a Point on Surface by Geologic Units Neighbouring around It	
	Tatsuya NEMOTO	231
P-5-11	Remote Sensing and GIS Intergration for Terrain Evaluation and Land Resources Assessment in North Western Vietnam	
	Van Dai NGUYEN	237
P-5-12	Landslide Hazard Mapping Using Bayesian Approach in GIS - Case Study in YangSan Area, Korea	
	Quoc Phi NGUYEN	243
P-5-13	Development of a Web-based GIS and Simulation Model for the Prediction of Flood and other Disasters	
	Binh Nguyen HOA	250
P-5-14	Development of Vietnamese Version of GRASS GIS	
	Susumu NONOGAKI	257
P-5-15	Surface Water and Ground Water Aspect for Environment Degradation	
	Nguyen SON	263
P-5-16	The Development of Web Mapping Application Using Open Source GIS Solution	
	Xianfeng SONG	267
P-5-17	Determining Uncertainty in Finnish Soil Data	
	Rangsima SUNILA	273
P-5-18	DEM Generation from SAR Image – An Experiment in Kagoshima Region, South Japan	
	Van Anh TRAN	279
P-5-19	OpenGIS Based Wireless Spatial Data Logger for Flood Mitigation	
	Nitin TRIPATHI	287
P-5-20	Geologic Modeling and Visualization Using GEOMODEL2003 - Visualization of Geologic Boundaries Based on Generalized Geologic Function	
	Go YONEZAWA	291

#### Session VI

##### Water Resource Management

S-6-1	Intergration of GIS , WEB Technology and Model for Monitoring Surface Water Quality of Basin River: A Case Study of Huong River	
	Long Bui TA	299

- S-6-2 Geoinformatics Applications for Predicting Ground Water Vulnerability and Testing the Compatibility of Drastic to Indian Conditions  
Kumar M.E SESHADRI 305
- S-6-3 Study Groud Water Resource on Red River Delta Zone by Remote Sensing and GIS  
Nguyen SON 314
- S-6-4 Drinking Water Resources in the Mekong Delta - Field Investigations and GIS Visualization  
Harro STOLPE 323

## Session VII

### Erosion, Terrain Evaluation & Landuse

- S-7-1 Mapping Spatial Distribution of Soil Erosion and Depositions for Northern Thailand Using Regional Scale Soil Erosion and Sediment Transport Model  
Habib-ur-Rehman M 331
- S-7-2 Combination of Supervised Classification and Ecological modeling in land use mapping  
Quang Vinh PHAM 337
- S-7-3 Some Pre-analysis Techniques of Remote Sensing Images for Land-use in Mekong Delta  
Tong Phuoc Hoang SON 343
- S-7-4 Using Landsat Images for Studying Land Use Dynamics and Soil Degradation, Case Study in Tamduong District, Vinhphuc Province, Vietnam  
M. V. TRINH 352
- S-7-5 Analysis Effect of the Land Cover Change to Soil Erosion as a Key for Land Use  
Anh Tuan VU 359

## Session VIII

### Geophysical Methods, Algorithm and System Development

- S-8-1 An Attempt to Eliminate Identical Logs in a Large Soil Drilling-log File  
Hideyasu ASAHI 367
- S-8-2 Metadata for Digital Topographic Map of Vietnam  
Lien DANG 373
- S-8-3 Geostatistics Combine with the Function of Interpolation in GIS  
Xuan Luan TRUONG 380

## Session IX

### Socio-informatics

- S-9-1 Dynamics of Land Cover-Land Use in different communities of Vietnam Northern Mountain Region: an Implication of Human Impacts  
Minh Truong DAO 389
- S-9-2 An Analysis of Sustainable Development in Vietnam, a Case Study of Dong Ha Town, Quang Tri Province  
Trinh Le HAI 395
- S-9-3 Temporal distribution of community temples in Northeast Thailand  
Yoshikatsu NAGATA 401
- S-9-4 GIS Integration in Monitoring and Evaluation (M&E) Applications  
Wayne TINLIN 407
- S-9-5 Ability of Combining Remote Sensing and Land Use Rights Registration in Land Use Data Acquisition  
Trung TRAN 415

## Session X

### Remote Sensing and Environmental Monitoring

- S-10-1 Comparison of Different Data Fusion Approaches for Surface Features Extraction Using QuickBird Images  
Shamshad AHMAD 423
- S-10-2 Land Cover Mapping of Vietnam Using MODIS 500m 32-day Global Composites  
Nguyen Dinh DUONG 432
- S-10-3 MODIS Applications in Environmental Change Researches in the Indochina Region  
Tran HUNG 438
- S-10-4 MODIS Time Series Remote Sensing for Epidemiological Modeling  
Markus NETELER 445
- S-10-5 Monitoring the Red River Using Digital Satellite Imagery  
Nguyen Dinh MINH 451
- S-10-6 Proposing a Method to Establish Vietnam Forest Map by Using Multi-temporal GLI Images and Ecological Models  
Thanh Hoan NGUYEN 457

## Session XI

### Special Session on Historical GIS

- S-11-1 Mapping Historical Maritime Exchanges between Vietnam, Thailand and Japan  
Mamoru SHIBAYAMA 467

### Abstracts – Without full-paper

## ABSTRACT

*Huong River plays an important role of socio - economic development of Hue City and Thua Thien Hue province. In the today strategy of sustainable development, water environment protection of Huong River is urgent and has a high reality.*

*General assessment of surface water quality of Huong River, which supplies water for Hue City, is research objects in many levels. These researches show that general assessment of surface water quality of Huong River is a complex problem, because there are many external temporal factors affect surface water environment of Huong River. As a result, it's necessary to develop and apply system approaches as well as information technology tools.*

*This paper represents some results of applying information technology and modeling method for Huong River. Furthermore, it also takes a notice of Huong River characters and present data of Thua Thien Hue Province. Main product of these researches is ENVIMSH (ENVironmental Information Management system for Song Huong river) - software, using GIS (Geographic Information System) Technology, Database and Web Technology, has many utilities for users to look up as well as compute in different scenarios. Main functions of ENVIMSH are monitoring data management of water quality, sewer and gutter management, pollutant dispersion simulation with models and environment information for users who are interested in their quality.*

## 1. INTRODUCTION

Aim of this research is to build an integrated tool of environmental database, GIS, model and Web technology for monitoring and management of river water quality, a case study: Huong River. All we know that general environment quality assessment is really a complex problem, because there are many external factors which usually change and they affect in environment as well as inhomogeneous characters of studied objects on time and space. In order to define environment quality, we must pay attention to mutual impacts of

data of physical, chemical, and biological processes. As a result, it is necessary to develop and apply information technology as well as environment database.

In recent years, study and apply Information Technology in general and Geographic Information System (GIS) Technology in particular in environmental management have been developed strongly in many Vietnamese science and technology centers (Bui Ta Long, et.al, 2002 - 2004). These results allow building information tools for data management relating to environmental problems as well as allow managers make decisions.

In recent years, a research group of Dr. Bui Ta Long, Institute of Applied Mechanics – Vietnamese Academy of Science and Technology carried out and made some studies and a series of software for environment management of Vietnam. Their main functions are management of monitoring data of water, air quality, of point sources, sewages; computation of pollutant dispersion and environment information. Some software INSEMAG, ENVIM have been applied in environment management, monitor for some cities and provinces of Vietnam, such as An Giang, Ba Ria – Vung Tau.

## 2 STRUCTURE OF ENVIMSH

Based on our past researches (Bui Ta Long, et.al, 2002, 2004), this study proposes a structure of software ENVIMSH in Figure 1. ENVIMSH includes main functions as shown in Figure 2. Main blocks and relationship between information streams in ENVIMSH are shown in Figure 3.

ENVIMSH has aims:

- Explain easily environment information;
- Support analysis of environment information;

Provide tools for analysis, assessment of different scenarios. Geographic Information System (GIS) plays an integrated basis for ENVIMSH. GIS organizes spatial information so that ENVIMSH can show maps, charts, graphs. GIS provides techniques for analysis of environment data layers and for display of relationships. ENVIMSH has a friendly-user interface. Zoom ability of ENVIMSH allows users to have a strong tool for environment analysis.

ENVIMSH includes different components for environment data analysis. These are:

- Assessment tools (data exploitation, graph drawing) which allow to analyse a heap of data;
- Utilities help to look up documents for environment monitoring and management;
- Automatic reports which help users to have a convenient tool for making reports basing on monitoring data from database.

Assessment tools in GIS environment allow users to estimate a chosen region, organize information, and display results. Computation modules allow users to value effect of pollutant discharge on a chosen region. ENVIMSH is designed mainly for environmental monitoring data management. In Vietnam idea of building databank for environment management is just in initial phase. In future, when Vietnam has national databanks, ENVIMSH will be expanded to directly access environmental databanks.

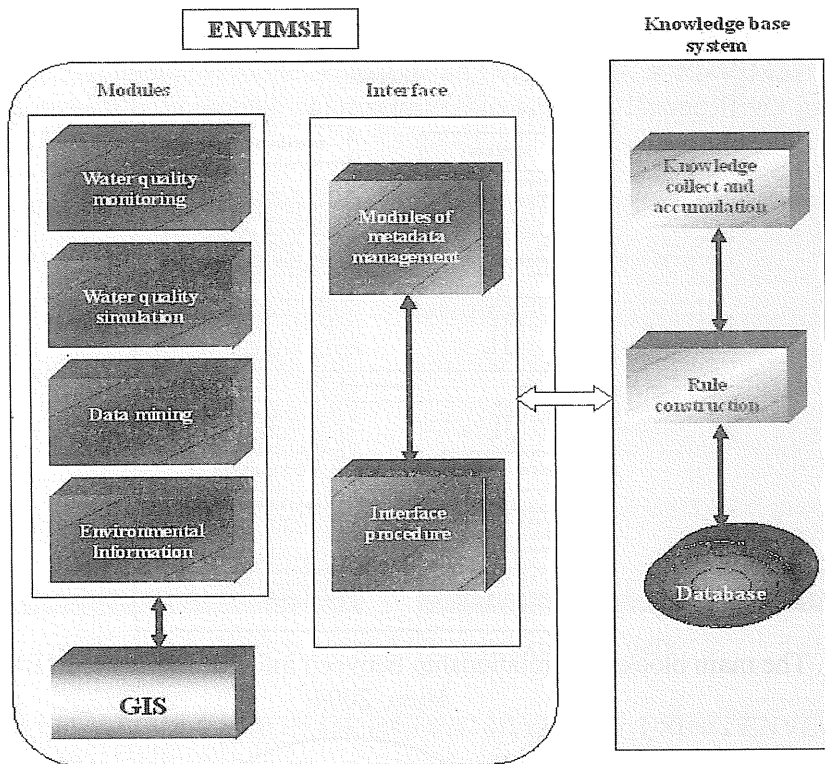

Figure 1. The principal scheme of the ENVIMSH

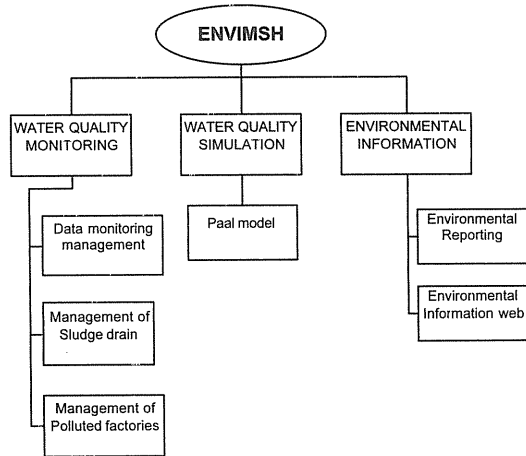

Figure 2. ENVIMSH information units /Ngoc Hieu,2004/

Water quality monitoring is one of main functions of ENVIMSH, based on actual situation of data collection in Hue, ENVIMSH integrated data from different departments, branches, centers as shown in Figure 4. Web reporting for monitoring data are shown on Figure 6.

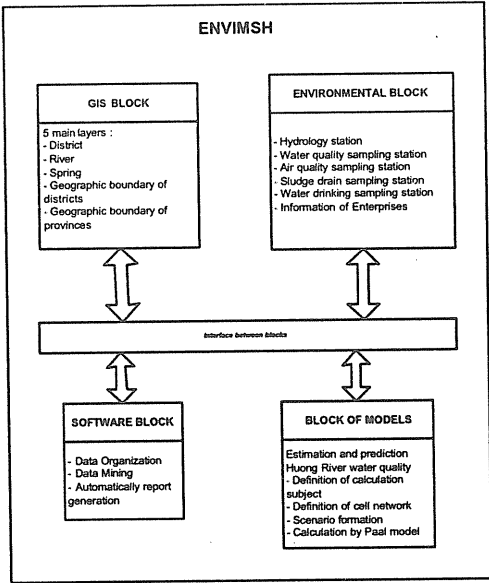

Figure 3. The main blocks and relationship between information flows in ENVIMSH /Ngoc Hieu, 2004/

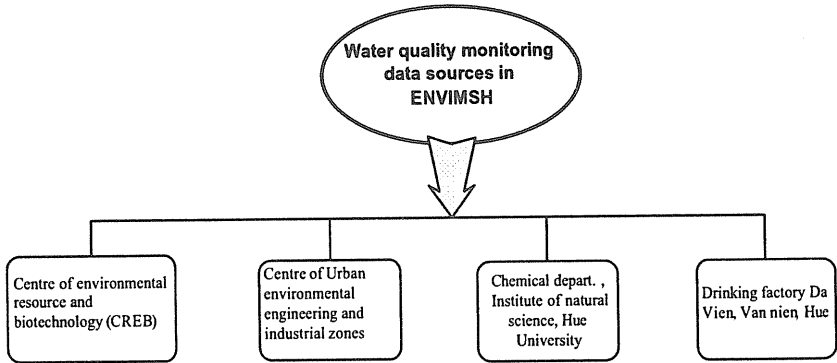

Figure 4. Water quality data sources integrated in ENVIMSH /Ngoc Hieu, 2004/

Based on experience of building software INSEMAG, ENVIM /Bui Ta Long, 2002/ and based on actual situation analysis of Huong River, this research has studied and built an environment database for ENVIMSH.

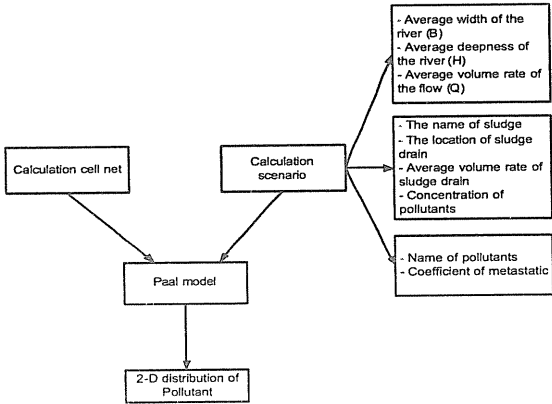

Figure 5. Automatic phases for computation, simulation of water quality in ENVIMSH/Ngoc Hieu, 2004/

Based on the mathematical model Paal /Bui Ta Long, 2002/, in ENVIMSH, we built a module which automatically computes point source effects along Huong River in the scope and limit of the subject /see Figure 5/.

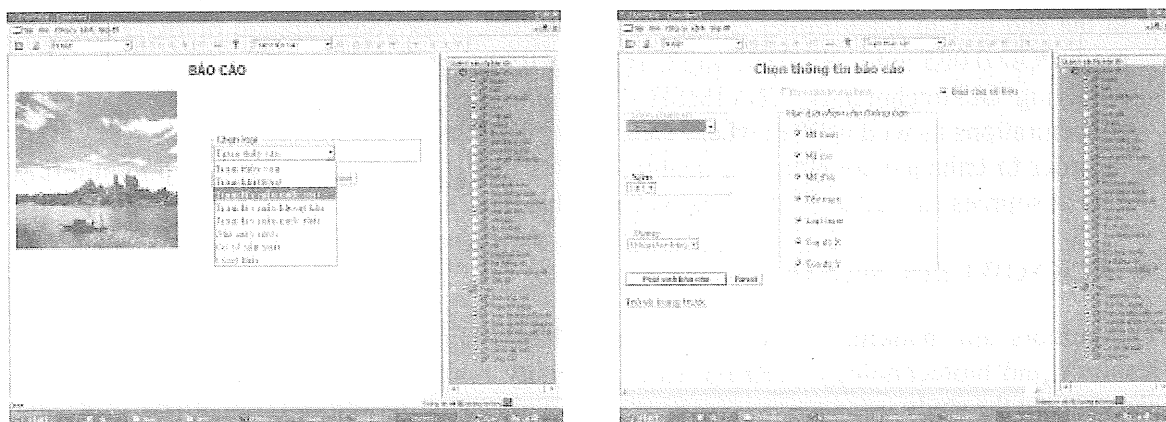

Figure 6. Web reporting for water quality data

### 3 WATER QUALITY SIMULATION OF HUONG RIVER BY USING ENVIMSH

Based on the above mathematical model, ENVIMSH can compute selected pollutant distribution in sites near the pollution source. Computation scope includes 12 drains from the beginning of Le Loi Street to the end of Chi Lang Street. Due to lack of data, the following computation results are not to include all of factors as well as accuracy of computation. Therefore its simulation focuses on quality than quantity.

Based on collected data, we will compute and simulate 12 drains from the beginning of Le Loi Street to the end of Chi Lang Street. In order to apply ENVIMSH, these drains are divided into 2 computation grids : grid 1 includes 8 drains (Figure 7), marked from SH1 to SH8, grid 2 includes 4 drains, marked from SH9 to SH12.

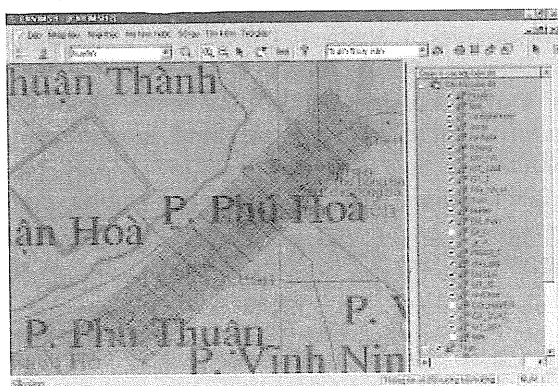

Figure 7. Computation mesh for drains from Ho Chi Minh Museum to Dap Da

Based on computed simulation results with Paal Model for Huong River, we can have some conclusions:

- According to history data (2002 – 2003), computation by ENVIMSH shows that water quality of Huong River reach from the beginning of Le Loi Street to the end of Chi Lang

Street is rarely affected by dismissed drains. Peak concentration of BOD is 0.00047 mg/l, COD 0.0024 mg/l, SS 0.0015 mg/l, and TDS 0.0015 mg/l.

- According to forecasted data to the year 2010, computation results by ENVIMSH show that water quality of Huong River in dismissed drains from the beginning of Le Loi Street to the end of Chi Lang Street is also rarely affected. Peak concentration of BOD is 0.002 mg/l, COD 0.005 mg/l, SS 0.012 mg/l, and TDS 0.018 mg/l.
- Applying GIS technology, ENVIMSH can define picture of 2D distribution of pollutant concentrations as well as sites where their concentrations are peak.
- In order to enhance computation quality of ENVIMSH, we should have more monitoring data at sources as well as hydraulic, hydrographic data.

#### 4 ACKNOWLEDGMENTS

The authors are thankful to the Dr. Le Van Thang, Director of Centre of Environmental resource and biotechnology (CREB), Hue university for supporting the monitoring data for carrying out the study.
